# Nebula ReadySuite™

Changing the way you look at load files.

Viewing, modifying, and validating load files can be a daunting task for even the most accomplished eDiscovery technologist. Whether you need to perform extensive QC on a production, normalize inbound submissions, or simply spot check the work of a colleague or supplier, ReadySuite has you covered!

ReadySuite perfectly blends ease of use with meaningful functionality to deliver an eDiscovery tool unlike anything else available.

View, convert, edit, manipulate and validate. All industry standard load files supported.

Validate document volumes and production sets. Find privilege documents before it's too late.

No advanced setup, servers, or databases required. Simply drag-and-drop files into the application to get started.

Create searchable PDFs. Output searchable text files from image sets.

Burn-in document redactions. Validate redaction consistency between image and text.

Create Relativity-compatible RSMF load files from chat message data.

# We bring load files to *life*!

Turning this gibberish ...

... into this instant visual.

# Nebula
### READYSUITE™

# Everything load files.
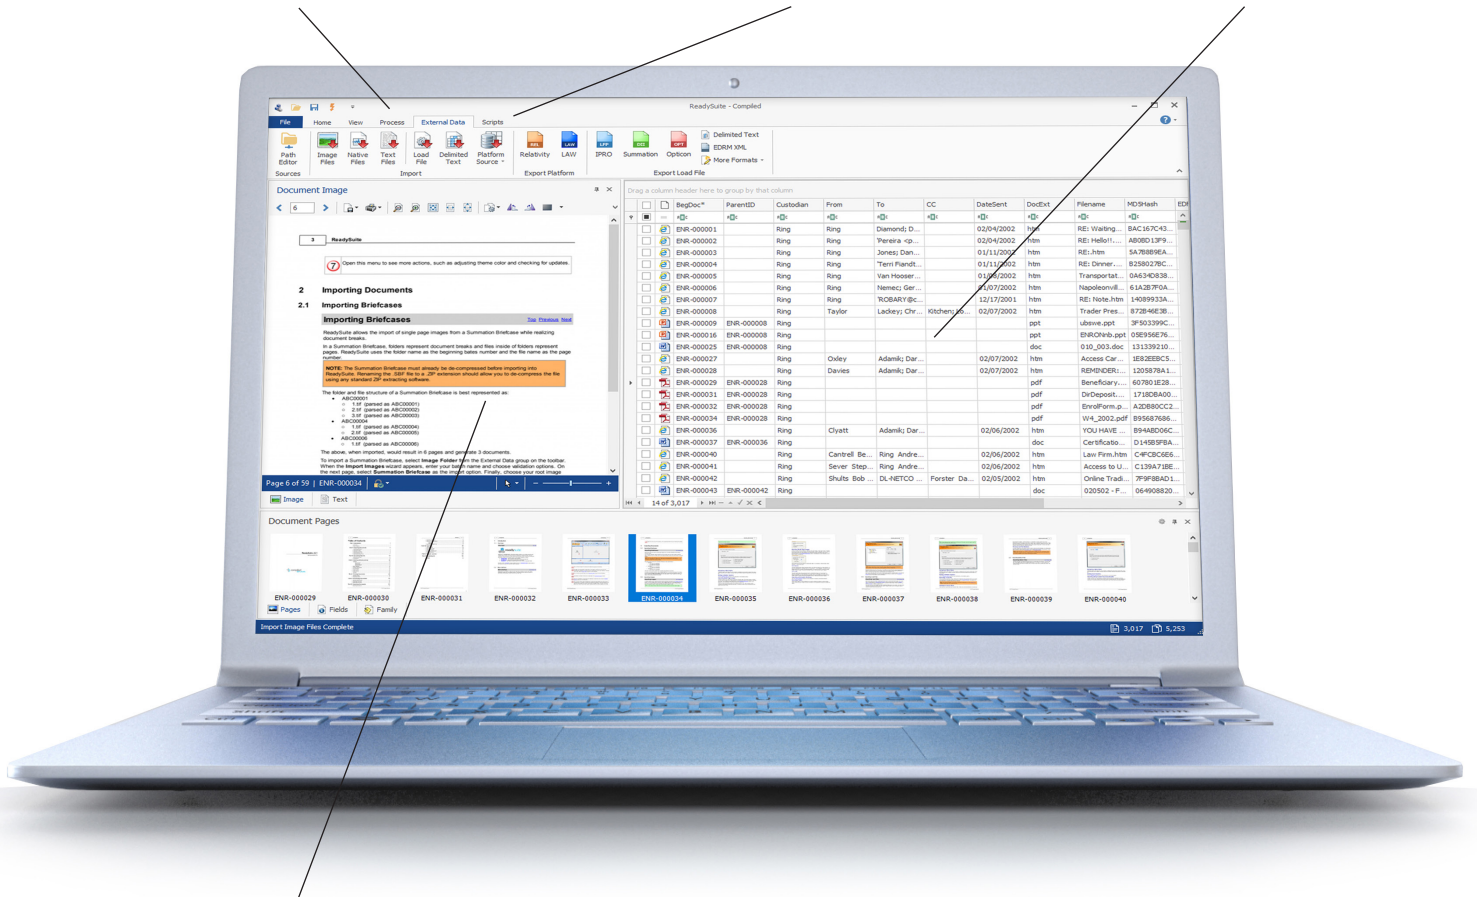

## EDIT VOLUME & PRODUCTION SETS

Remove documents, renumber pages, add endorsements and OCR redacted images within ReadySuite.

## EXTENSIVE SCRIPT LIBRARY

Improve the speed and accuracy of common litigation tasks with over 70 provided scripts or create your own with the built-in script editor.

## ROBUST DOCUMENT GRID

Easily supports opening and filtering DAT files at 1GB+ in file size with over millions of records.

## INTEGRATED DOCUMENT VIEWER

Gain greater clarity about your data by viewing individual documents directly within ReadySuite.

## AUTOMATION

Create script packs and automate important features of ReadySuite with headless mode.

## RELATIVITY INTEGRATION

Load DAT files, metadata and related files directly from ReadySuite for an improved user experience. Import coding from Relativity to assist with QC of productions.
