VenioOne

Lightning Fast, AI-Powered, End-to-End eDiscovery Platform

Accurate Automated Processing and AI-Powered Review in the Cloud or On-Premises

Key Benefits

Lightning Fast, Automated Processing

- Up to 10x faster processing (up to 10 TB of data/day)
- Simultaneously process multiple media and job types
- Reorder jobs with no data loss or rework

Full-Featured, AI-Powered Review

- Powerful alternative to more expensive review-only solutions
- Auto-collection for tiered reviews
- Email thread view, social network diagram, and mobile data visualization
- TAR/CAL reduce data to be reviewed up to 90%

10x More Cost-Efficient eDiscovery

- One platform and database for processing, analytics, review, and production
- Up to 10x lower licensing, Infrastructure, and staffing costs
- Flexible licensing for burst use cases

VenioOne makes it easy for legal and investigative teams to rapidly uncover the most important information in the most complex of cases. With its lightning fast processing, AI-powered technology assisted review (TAR/CAL), deep analytics, and cloud and hybrid delivery, VenioOne provides everything you need to handle more cases with greater speed, accuracy, and predictability in a single cost-efficient eDiscovery platform.

VenioOne enables you to automatically upload and process petabytes of data, cull, analyze and review millions of documents, and seamlessly produce required information within weeks rather than months or years and without the need for capital intensive licenses or infrastructure, large teams, and complex and unpredictable processes.

VenioOne is easy to use and comes with modern, automated processing, analytics, review, and production in a single eDiscovery platform with no need for complex integrations and scripts.

Key Features

Automated and Lightning Fast Processing

VenioOne can process up to 10 TB of data per day and scale to process petabytes of data across thousands of cases and users either on-premises or in the cloud. With the platform's ability to simultaneously process multiple media, custodians, and job types, handle hundreds of types of data, and intelligent error handling, your team can focus on what's important and handle more cases leading to higher team productivity. Flexible job queue reordering with no data loss or rework means juggling ever-changing priorities won't cause missed deadlines.

Full-Featured, AI-Powered, Assisted Review

VenioOne comes with native, full-featured, self-learning, and easy to use review capability for linear and batched review, as well as

Self-Service Client Portal

- Secure, browser-based drag-and-drop uploads
- No need to ship data or install software
- TAR/CAL reduce data to be reviewed up to 90%

TAR and CAL. As reviewers begin reviewing, our machine learning engine reduces case data by up to 90% to surface what matters most in your case or investigation. Email thread views easily identify missing or deleted email content while our social network diagram provides a broad visualization of communications with the ability to drill down into individual conversations. Auto-collection enables tiered reviews and logical tagging makes legal review teams more productive and efficient.

End-to-End eDiscovery That Is 10x More Cost-Efficient

Get a complete eDiscovery solution that comes with processing, analytics, review, and production in a single platform that eliminates the cost and friction of multiple solutions. This means that you no longer need to copy data across disparate solutions, build complex integrations and scripts, or deploy hundreds of servers on premises. Flexible licensing options for burst and cloud use cases further add to the cost-efficienciency of Venio's eDiscovery solution with up to 10x lower TCO compared to other eDiscovery platforms with similar capabilities.

Self-Service Client Portal

VenioOne OnDemand (VOD) provides a self-service UI for modern clients looking to cut time, cost, or the risk of litigation by uploading their own data to an eDiscovery platform. Our simplified and highly responsive, browser-based UI allows clients to create new cases, upload data, and easily perform analysis, searches, and simplified production on their own. Built-in collaboration features can be used with witnesses, experts, or others on the team throughout the case or investigation to either 'invite to upload' or securely share portions of data without adding additional licenses.

Smooth and Efficient Operations

Get up to 10x higher team productivity by cutting time spent on tedious tasks, such as new case creation, tag and coding setup, review set generation, imports, exports and production. Customizable and automated workflows enabled by out-of-the-box wizards and templates ensure consistent and efficient processes from ingestion through production. This automation and guided workflows also leads to predictable quality and outcomes every time no matter who performs the task.

Industry Leading NPS and Customer-Centric Vision

Venio Systems has one of the highest NPS scores in the industry. We proactively reach out to our customers to collect feedback and discuss roadmaps and opportunities through regularly scheduled customer calls. All of this ensures that our vision is focused on what you need to grow your business.
